

Objective:

To work in an environment that presents me with new challenges and growth of opportunities. To be involved with technically innovative, fast paced & forward thinking. My ideal scope should be an environment, providing me an opportunity for the development and to be a part in the growth of the organization.

Summary Skills:

- Having 5 years and 2 months of professional experience in Information Technology.
- 3 years of experience as a Informatica PowerCenter Administrator.
- 2 years of experience in ITIL based IT Operations and Incident management
- 2 years of experience as a Informatica MDM Hub Administrator
- Sound knowledge in SQL.
- Extensive Knowledge of Oracle10g, Unix
- Excellent research and problem solving skills.
- Flourish in both independent and collaborative work environments with quick learning abilities
- Highly self-motivated and goal-oriented.

Working with Xyz

Client : Xyz

Responsibilities:

- Involved with installation, configuration & administration of Informatica 9.1.0 MDM Hub servers
- Performed Informatica Administration & Production support for Production Environment and Migration
- Experience with Unix shell scripting
- Executing Batch Jobs in Batch group /Batch viewer
- Worked with Jboss admin console
- Raising SR with Informatica Product support for Technical issues
- Involved with installation, configuration and administration of Informatica 9.5.1 servers.
- Set up Informatica Grid architecture with High Availability option
- Configuring Metadata Manager, Analyst, Model repository

- Starting and Stopping Informatica servers
- Recycling Integration services, Repository services
- Import/Export of Workflows
- Providing Production support of Informatica Servers
- Monitoring Prod, Pre-Prod, UAT, TEST & Dev and sending Monitoring reports
- Providing On call and 24/7 & L2,L3 support for Informatica servers
- User administration in Linux/Unix
- AIX, Linux Administration
- Configured SAP with Informatica
- User administration in V9.6.0/9.5.1/9.1.0 for security Native domain assigned Roles and Privileges for Users
- Resolving locks and conflicts in Repository
- Performed Domain activity monitoring and User Activity Monitoring in Power center V9.6, 9.5.1
- Worked in Migrating Repository from V9.5.1 to 9.6.1
- Managing Informatica MDM Hub console
- **Worked in Production ticketing tools(BMC remedy, JIRA, HP Openview ,ITSM)**

Environment: Informatica 10.1,9.6, DB2, Proactive Monitoring for Power Center,
AIX U,nix shell Scripting

Worked with Xyz

Client : Xyz

Responsibilities:

- Performed Informatica Administration & Production support for Production Environment and Migration
- Performed Migration of repository objects like mappings, Folders, workflows etc
- Involved with installation, configuration & administration of Informatica 9.1.0 MDM Hub servers
- Administering & Restarting Jboss servers
- Change list creation in MDM hub
- Metadata Export of ORS
- Configuring and registering ORS

- Managing Informatica MDM Hub console
- User Management in MDM hub console
- Executing Batch Jobs in Batch group /Batch viewer
- Worked with Jboss admin console
- Deployment of .Ear file in Jboss server
- Configuring Logging in Log4j.xml
- Raising SR with Informatica Product support for Technical issues
- Involved with installation, configuration and administration of Informatica 9.5.1 servers.
- Set up Informatica Grid architecture with High Availability option
- Configuring Metadata Manager, Analyst, Model repository
- Starting and Stopping Informatica servers
- Recycling Integration services, Repository services
- Import/Export of Workflows
- Providing Production support of Informatica Servers
- Monitoring Prod, Pre-Prod, UAT, TEST & Dev and sending Monitoring reports
- Providing On call and 24/7 & L2,L3 support for Informatica servers
- User administration in Linux/Unix
- RedHat Linux Administration
- Configured SAP with Informatica
- User administration in V9.6.0/9.5.1/9.1.0 for security Native domain assigned Roles and Privileges for Users
- Resolving locks and conflicts in Repository
- Performed Domain activity monitoring and User activity Monitoring in Power center V9.6, 9.5.1
- Worked in Migrating Repository from V9.5.1 to 9.6.1
- Managing Informatica MDM Hub console
- **Worked in Production ticketing tools(BMC remedy, JIRA, HP Open view ,ITSM ,Service Now)**

Environment: Informatica MDM hub 9.1.0, Informatica 9.6/9.5.1/9.1.0, Oracle, Jboss, RedHatLinux

worked with Xyz

ICT - Team is a central Function managing Risk platform in Testing Environments.

ICT Lead has to work closely with development and DBA team for Proper Planning and ensures smooth BAU for each Release.

ICT Currently working with RBS as (JUNIOR Project Manager/Team LEAD) Fr Oct 2010- till date

ICT - Team is a central Function managing Risk platform in Testing Environments.

Key deliverables:

- Implementation & project Plan
- Status Report
- Line management of Team members

Scope

- To ensure successful Implementation of projects against agreed timelines and specifications by closely monitoring the progress, contributing to the creation of Impl plan, identifying & mitigating risks, resolving issues for each release.
- To ensure that Implementation Process are met by performing reviews and mentoring the team members.
- To deliver highly performing team by effective talent and performance management, conducting appraisals and resolving staff issues.
- To ensure there is clear understanding of project by using appropriate channels of communication with business stakeholders and project teams.

Responsibilities:

- Involved with installation, configuration and administration of new servers. This includes
- performance tuning, data security and automation in Power center V9.1.0
- Worked with Informatica admin console 8.6 & Informatica administrator v9.1.0
- Set up Informatica Grid architecture with High Availability option
- User administration in V9.1.0 for security Native domain assigned Roles and Privileges
- for Users

- Resolving locks and conflicts in Repository
- Performed Domain activity monitoring and User activity Monitoring in Power center
- V8.6,V9.1.0
- Worked in Migrating Repository from V8.5 to 9.1.0
- Worked in Production ticketing tools ITSM, HP open view
- Performed Backup and Recovery of Repository
- Performed Informatica Production support for Production Environment and Migration
- Performed Migration of repository objects like mappings, Folders, workflows etc from
- Dev to Test into QA Measuring Performance/Establishing Baselines Internal to
- Informatica Mapping and Session optimization

Worked with Xyz

Client : Xyz

I'm involved in different phases of SDLC and PLC on Business Intelligence & Enterprise Data Warehousing. I manage day-to-day relationship with client stakeholders and resolution of all issues. Maintain and communicate project status to all stakeholders in reports and status meetings. Acquire incremental business within the project through change control. Identify sales opportunities, participate in presales planning, project pricing, bid review, and presentation of proposals.

I've experience in development, deployment and production support systems, Involved in life cycle of BI-DWH (Technical/Production Services), interact effectively with members of Business Engineering committees at various levels and other teams involved with the Data Warehousing Life cycle. I am actively involved in Project Proposals (RFP/RFI), Budgeting & Resource planning. Represent the organization in Orals and bids. Builds cost models that are competitive and comply with quality requirements, efficient consulting with customer to define the scope of an engagement and identify solution requirements.

Responsibilities:

- Performance Tuning of the Data Warehouse
- Creating /Running sessions & Batches using Server Manager to load the data into the target Database
- Performed Unit testing for Phase I mappings.
- Used Informatica Power connect to extract data from DB2.
- Automating the extraction by scheduling Informatica sessions and workflows.
- Worked with PMCMD,INFACMD commands
- Tuning the Informatica mappings, sessions, workflows and SQL queries.
- Creating stored Procedures for updating tables
- Performed versioning (check in and check out) for Mappings and workflows
- Building informatica mappings and mapplets to extract data from staging into Datamart
- Performed folder and user administration in Informatica
- Comparisons of informatica mapplets, mappings and other objects using new features of Informatica 6.1.2 and study their differences before moving into productions.
