Experience Summary

- Solutions-focused Middleware professional with accomplished experience in executing multi- million-dollar project engagements for major clients focused on software developments and customization in enterprise application integration in client facing roles in complex onshore-offshore delivery models.

- Expertise in understanding the business processes and existing systems and in making recommendations w.r.t enhancements along with impact analysis of the legacy applications. Rich experience in enterprise application integration (EAI) design, implementation, monitoring and management using Mule and TIBCO Suite.

- Expertly define and map project scope and provide direction to programmers to align technology solutions with project requirements. Exceptional systems analysis and design expertise. Experience in Scope identification for different phases of Project and getting sign off for all from Client.

- Track and Review project deliverables, Suggested& Implemented Process Improvement projects to enhance release cycle time. Rich experience in delivering complex transformation and upgrade projects.

- Coordination between business team and COE teams to gather relevant information and translate the same to technical team in form of design documents.

- Vast experience in pre-sales activities such as RFP/RFI responses, driving solution architecture, effort estimation, capacity planning,

delivering successful proof-of-concepts and presenting solution to client.

- Experience in Creation of Staffing based on effort and complexity of project. Expertise in competency building by mobilizing cross skills training.
- Good exposure to project framework and approach creation, value adds, performance anti pattern approach and implementation of it.
- Experience in Project framework and approach creation.
- Expertise in supporting hiring team.
- Ability to work interdependently and manage business expectations with delivery focused approach.
- Experience in Resource and Project planning with Senior management.
- Track and Review project deliverables. Suggested & Implemented Process Improvement projects to enhance release cycle time.
- Experience in Solution designing and Project high level Architecture creation.
- Extensive Experience in Enterprise Application Integration (EAI) design, implementation, monitoring & management using TIBCO.
- Experience in Scope identification for different phases of Project and getting sign off for all from Client.

Technical Skills

- ➢ **EAI Technology Stack**
    - Mulesoft Connectors
    - Mulesoft Anypoint studio Platform
    - Business Works 5.x
    - Business Events

- Business Connect Administrator 5.x
- Runtime Agent 5.x
- EMS 6.0.0
- ADB 6.3
- SmartMapper 5.x
- TIBCO iprocess 10.x
- TIBCO AMX Service Grid 3.2
- Administrator 3.2
- EMS 7.0

Java: Core Java, JavaScript, ant & Maven.

Operating Systems: Windows 2003 & 2007 and Linux

Databases: MS SQL Server 2005, Oracle 9i & 10G.

Others: Spotfire, Core Java, SSL, SVN Tortoise Subversion, CVS, Remedy, HP QC&ALM

Project Accomplishments

Project #1

Title : XYZ
Client : XYZ

Brief Description

This implementation involves integration of frontend systems (like Navigator/ BriovaRx / MemberPortal / Scriptmed) to communicate with backend systems seamlessly.
It also include many mission critical (eligible for financial penalty) based implementations in which UHG interacts with other consumers like BCBS (Blue Cross Blue Shield), CIGNA, HighMark, HCSC etc.

Responsibilities

Responsible for preparing complete POC list which would cover design approaches, Exception framework, Custom implementation to kick start new project.

- Responsible for creating best practices to follow at different phases of the project.
- Setting up different data centres in High availability and disaster recovery for all stakeholders for better execution.
- Responsible for designing and providing the enterprise architectural approach to ensure business needs are converted to technical specifications with least time to deliver to production.
- Effort calculation for the resources for billing cycles
- Coordinating with business to ensure smooth flow of the business logics

Environment

- TIBCO Business Works
- Jenkins
- TIBCO EMS

Project #2

Title : XYZ
Client : XYZ

Brief Description

Client is developing Shipment Enterprise foundation service to view shipment data in a single platform and thereby increasing shipment delivery efficiency. Solution is achieved leveraging ESB, CEP solutions.

Technologies:

- TIBCO Active Spaces
- TIBCO Business Events

- Silver Fabric
- TIBCO BW
- TIBCO EMS
- TIBCO Admin
- Unix
- SVN
- Core Java
- Jenkins
- UDeploy
- Spotfire

Responsibilities

➢ Managing a team of 15 people and project is about 4 Million $ in revenue. Scrum teams are 2 Development, 1 System team. Development teams work on business features. System team work on Integration system related activities. Project is of Agile based and following SAFE framework.

➢ Our teams implemented the following major stories:
  - Cache Externalization in Business Events.
  - Replacing AS channel with JMS channels.
  - Exposing BE engine over Rest/Http.
  - Implement java based Unit tester for BE engines
  - Migrating unit tester execution to Unix from windows for Continuous Integration or Deployment
  - Environment management activities – L1,L2,L3.
  - Designing BE Engine template covering architectural standards, TIBCO suggestions and best practices

➢ Client interaction and managing various stakeholders in solution

➢ Mentoring the team, preparing technical design to deliver scrum user stories.

➢ Review of key deliverables from Offshore Team.

➢ Resolving technical challenges.

➢ Assisting Onsite team in POC/design aspects.

- ➤ Project Management Activities – sending weekly status report, interacting with Product owner, Product manager.
- ➤ Preparing new proposals required for the client to onboard new scrum teams
- ➤ Submitting weekly scrum team's status report to client
- ➤ Explore new technologies required for the project like Spotfire, **XYZ** Security implementation for rest services.

Project #3

Title : XYZ
Client : XYZ

Brief Description

WorkFlow Management System is a project that captures the data from the request of the new connection received by the client and sends the data to the corresponding teams. The project consists of fetching the data from the main customer-handling centre and sending the data in the required format to the concerned end-point to fulfil the order.

Responsibilities

- Implementation of the FDD i.e. coding.
- Unit and integration testing of the implemented functionality.
- Preparation of Technical Design Document (DD)
- Giving Demo to the Client to approve its various Iteration levels
- Responsibility Analysis of the existing code and work on new client requirements
- Preparation of Test Plan and Test Specifications for solving the issues

- Programming coding and developing the new releases.

- Preparation of Checklists and testing the solutions of issues

Environment

- Oracle 10 g
- I Process
- TIBCO BW

Project #4

Title : XYZ

Client : XYZ

Brief Description

Retail Management System is a project that captures the data from the retail shops of the client and sends the data to the corresponding processing systems. The project consists of fetching the data from the retail shops and sending the data in the required format to the concerned end-point.

Responsibilities

- Complete understanding of SDLC (Software development life cycle) to enable component   Development.
- Analysis of reported business scenario by customer related to Inventory Valuation system.
- Interaction with customers, project management to resolve issues.
- Taking up new enhancements and work on their implementation.
- Peer code review.
- Analysis of the existing code and work on new client requirements
- Preparation of Checklists and testing the solutions of issues

Environment

- Oracle

- IBM Rational ClearCase

Project #5

Title : XYZ

Client : XYZ

Brief Description

The project involves the migration of the existing BW code from version 5.8 to the new TIBCO BW version 5.9 and with latest adapter versions. This also involves the setting up the different environment with latest versions.

Responsibilities

- Analysis of the existing code.
- Preparation of Test Plan and Test Specifications for solving the issues
- Programming coding and developing the new releases.
- Preparation of Checklists and testing the solutions of issues
- Development and deployment of the BW code in separate environments.
- Managing and training new Team members.
- Actively participate in providing various Value add Ideas to client which helps to gain $ values and improve processes to work and analyse the Project.

Environment

- TIBCO BW
- Adapters
